ABSTRACTED-PUB-NO: DE 20101339U

BASIC-ABSTRACT:

NOVELTY - The quiver (1) is of a cylindrical shape with a slightly wider diameter at the top (2) and facilitates the accommodation of a stick, a short piece of a thick rope, or a special dog toy (3). During the training it is important to divert the dog's attention from the hands of the trainer, which normally holds the toy, in order to fix his view on the face. A string (6), guided through two holes (8,9) at the top (2) of the container (1) can be laid around the neck and guided along the space under one armpit, while an elastic belt (7) holds the lower end of the device (1) close to the body.

USE - The container used for the transport of a toy for rewarding a dog during an obedience training.

ADVANTAGE - The toy can stay in the quiver until a step of the training is

completed and does not distract the dog's attention.

DESCRIPTION OF DRAWING(S) - The drawing shows a perspective view of the device.

quiver 1

wider top 2

shoulder strap 6

waist belt 7

upper holes 8,9

lower holes 10,11,12,13
